

Rattlesssssnakes

These sneaky snakes have a shaking “rattle” at the end of their tails to warn enemies to **stay away**. Enemies that don’t, might receive a very nasty bite!

Rattlesnakes usually move very slowly,

Forked tongue can be used to “smell” where prey is.

A rattlesnake’s guide to hunting

1 Ssssseek out

Snakes don’t have ears like we do, so they can’t listen for prey. But they can feel **vibrations** around them, and even detect nearby heat. They use these special skills to track down food.
