

but if they're disturbed, they're lightning fast!

Noisy rattle

Rattlesnakes have rings made of keratin at the end of their tails. They shake them to make a noise and warn off enemies.

Rattlesnakes feed on small animals, such as mice.

rattle

in three

ssssteps!

2 Sssstrike

Once a rattlesnake finds its prey, it uses its fangs to inject the animal with deadly **venom**. The venom either kills the prey or stuns it so it can't get away.

3 Sssssswallow

Finally, the rattlesnake opens its mouth wide and **swallows** the prey whole!
