

A frog's life

Frogs are amphibians, which means they can live on land and in water. Frogs start off as eggs, and go through several **changes** before becoming adults.

1

A female frog lays lots of eggs, called frogspawn, in water.

Frogspawn

Smooth,
slimy skin

Frog

I need
to stay close to
water to stop my skin
from drying out.

4

Finally, the froglets
grow into adult
frogs that can live
in or out of water.
