

A close-up photograph of a koala clinging to a thick, dark brown tree branch. The koala's grey, fluffy fur is prominent, and its large, dark nose and pinkish mouth are visible. It appears to be resting or sleeping. The background is a solid, bright yellow-green color.

The eucalyptus is the main food source for koalas. They can eat up to 18 hours a day.

And while some creatures only take short naps, others sleep almost all day long!

The eucalyptus leaves **koalas** eat don't give them much energy, so koalas need a lot of rest. They can sleep for up to 18 hours a day!

Bats sleep upside down.
When they wake up they drop
into the air and fly away.

Snakes can't close their eyes, so it's hard to know when a snake is asleep!

Dolphins never go into deep sleep because they need to be awake to breathe. So when a dolphin sleeps, half of its brain stays awake.
