

Taking a trip

Many animals make **long journeys** to escape bad weather, find food, and breed.

These journeys are called **migrations**.

Arctic tern

Start: The Arctic

Finish: Antarctica

These birds fly from the Arctic to Antarctica – all the way on the **other side of the world** – to mate. Then they fly back again!

Arctic terns travel further than any other animal.

Red crab

Start: The forest

End: The ocean

Each year, millions of red crabs on **Christmas Island**, near Australia, travel from the forest to the ocean to lay their eggs.

Roads on the island are closed to let the crabs cross.
