

What makes a mammal?

Mammals are a **group** of animals.
They come in many shapes and sizes,
but they do have a few things in common.

Am I
really like a
POLAR BEAR?

Did you
know that
PEOPLE are
MAMMALS?

Born as babies

Whether they live on land or in water,
almost all mammals are born instead
of hatching from eggs like birds. Every
baby mammal drinks **milk**.

Warm-blooded

All mammals are **warm-blooded**.
This means that they keep a constant
body temperature whether they're in a
hot jungle or in the freezing snow.
