

Vulture

Hawk

Parrot

Woodpecker

An extra long beak helps hummingbirds reach into flowers for delicious nectar.

Hummingbird

Puffin

What links them?

Although birds can look and act very differently, there are a few things they all have in common.

Birds have feathers that keep them warm and dry.

All baby birds hatch from eggs.

Birds have beaks to help them eat and clean themselves.

A long tongue and a sharp beak helps a puffin carry lots of fish in its mouth at once. What a mouthful!
