

Fishy family

There are more than **33,000** different types of fish, and they come in a whole range of shapes, sizes, and colours.

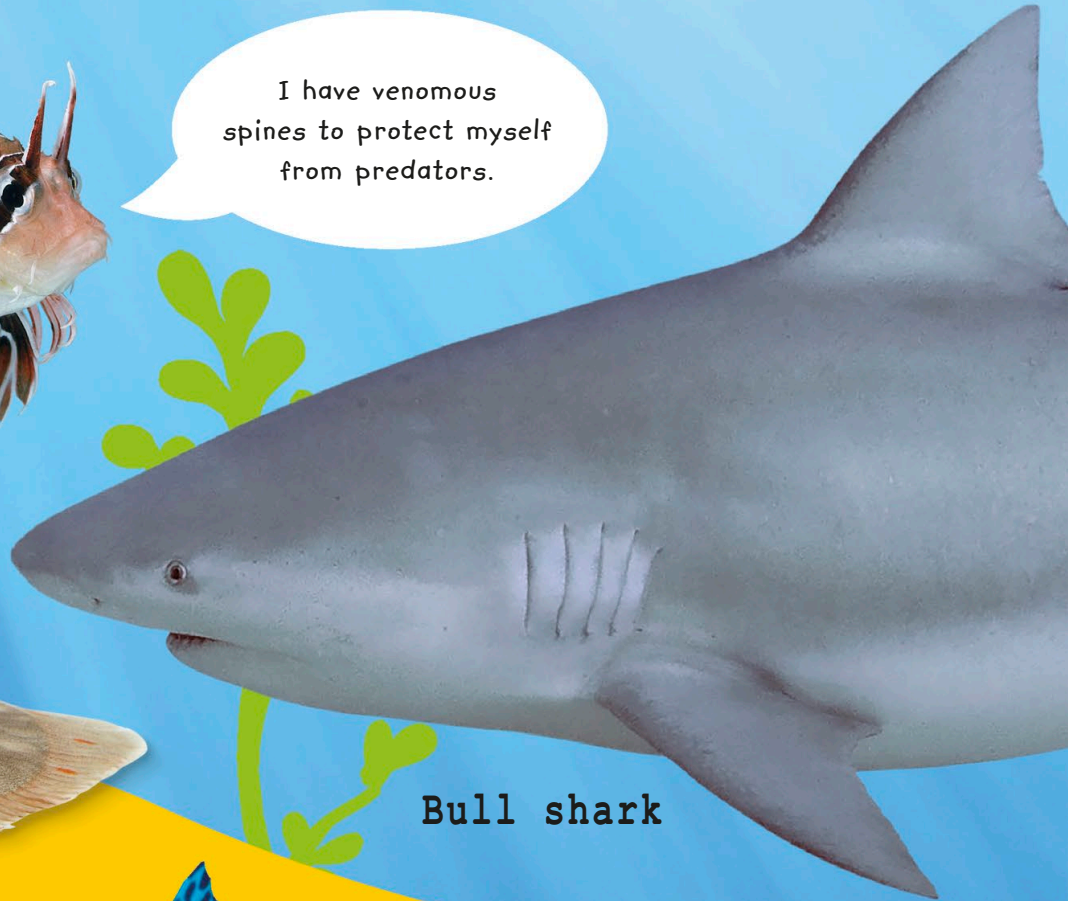

Lionfish

I have venomous spines to protect myself from predators.

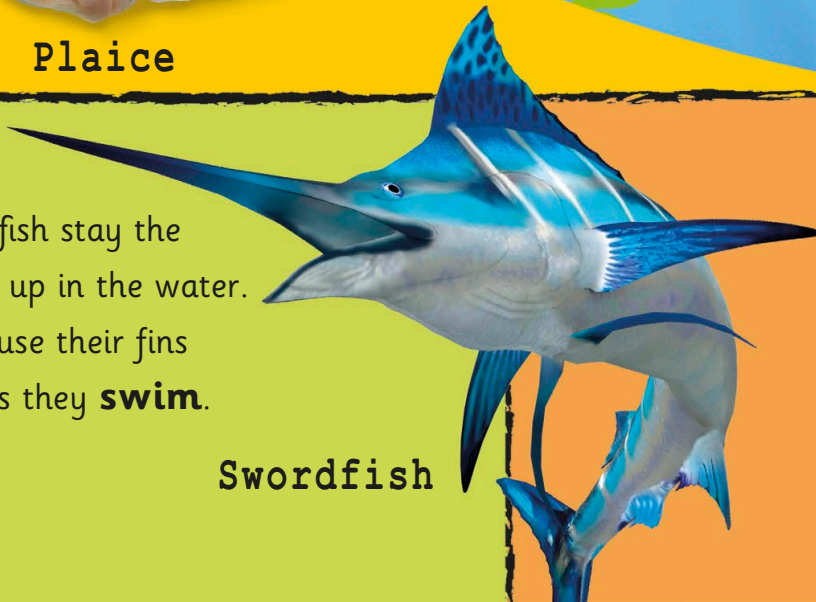

Plaice

Bull shark

Fins

Fins help fish stay the right way up in the water. Fish also use their fins to steer as they **swim**.

Swordfish

Cold-blooded

Most fish are cold-blooded, so their bodies stay the same **temperature** as the water.
