

The lizard king

Komodo dragons are the kings of the reptile world. They're so scary that the only thing a komodo dragon is afraid of is a **bigger** komodo dragon!

Deadly spit

One of the most amazing things about a komodo dragon is its **tongue**. It uses it to "smell" its prey from afar – and can sort of "taste" its food before eating it!

Watch out! A komodo dragon's bite is venomous!

Survival instinct

Only the biggest and toughest komodo dragons dare to explore the islands. Little ones stay safe by living in **trees** until they're about 4 years old.
