

THE LABYRINTH OF MARS

Noctis Labyrinthus (which is Latin for "labyrinth of the night") is a complex system of steep-walled canyons at the western end of the giant Valles Marineris rift valley on Mars (see p.156). It is thought to result from faulting, when the giant volcanoes on the Tharsis ridge of Mars caused the crust to bulge in this area. Landslides can be seen on the valley floors.
