

# THE GREEK ALPHABET

On most star charts, bright stars are identified by Greek letters according to a system invented by Johann Bayer (see p.72).

|         |   |        |   |         |   |         |   |
|---------|---|--------|---|---------|---|---------|---|
| Alpha   | α | Eta    | η | Nu      | ν | Tau     | τ |
| Beta    | β | Theta  | θ | Xi      | ξ | Upsilon | υ |
| Gamma   | γ | Iota   | ι | Omicron | ο | Phi     | φ |
| Delta   | δ | Kappa  | κ | Pi      | π | Chi     | χ |
| Epsilon | ε | Lambda | λ | Rho     | ρ | Psi     | ψ |
| Zeta    | ζ | Mu     | μ | Sigma   | σ | Omega   | ω |

# VISIBILITY ICONS

Beside every photograph is an icon indicating the kind of view it illustrates. Some photographs show the star or deep-sky object as it can be seen by the naked eye, through binoculars, or through amateur telescopes. Others are the result of CCD photography or show the view through professional observing equipment.

- Naked eye
- Binoculars
- Telescope (amateur)
- CCD
- Professional equipment

# ALPHABETICAL INDEX OF THE 88 CONSTELLATIONS

The constellation entries are ordered by their position on the celestial sphere, beginning with Ursa Minor in the north and spiraling south in a clockwise direction before finishing with Octans. This alphabetical list provides an alternative way of locating constellation entries.

|                |       |                  |       |
|----------------|-------|------------------|-------|
| Andromeda      | p.368 | Canis Major      | p.392 |
| Antlia         | p.396 | Canis Minor      | p.392 |
| Apus           | p.423 | Capricornus      | p.404 |
| Aquarius       | p.387 | Carina           | p.411 |
| Aquila         | p.383 | Cassiopeia       | p.357 |
| Ara            | p.415 | Centaurus        | p.398 |
| Aries          | p.371 | Cepheus          | p.356 |
| Auriga         | p.359 | Cetus            | p.389 |
| Boötes         | p.363 | Chamaeleon       | p.423 |
| Caelum         | p.405 | Circinus         | p.413 |
| Camelopardalis | p.358 | Columba          | p.408 |
| Cancer         | p.375 | Coma Berenices   | p.376 |
| Canes Venatici | p.362 | Corona Australis | p.415 |

|                 |       |              |       |                  |       |                           |       |
|-----------------|-------|--------------|-------|------------------|-------|---------------------------|-------|
| Corona Borealis | p.379 | Hydra        | p.394 | Norma            | p.414 | Sagittarius               | p.400 |
| Corvus          | p.397 | Hydrus       | p.419 | Octans           | p.425 | Scorpius                  | p.402 |
| Crater          | p.397 | Indus        | p.416 | Ophiuchus        | p.381 | Sculptor                  | p.404 |
| Crux            | p.412 | Lacerta      | p.369 | Orion            | p.390 | Scutum                    | p.382 |
| Cygnus          | p.366 | Leo          | p.377 | Pavo             | p.392 | Serpens (Caput and Cauda) | p.380 |
| Delphinus       | p.385 | Leo Minor    | p.376 | Pegasus          | p.386 | Sextans                   | p.396 |
| Dorado          | p.421 | Lepus        | p.407 | Perseus          | p.370 | Taurus                    | p.372 |
| Draco           | p.415 | Libra        | p.379 | Phoenix          | p.417 | Telescopium               | p.416 |
| Equuleus        | p.385 | Lupus        | p.399 | Pictor           | p.420 | Triangulum                | p.369 |
| Eridanus        | p.406 | Lynx         | p.359 | Pisces           | p.388 | Triangulum Australe       | p.414 |
| Fornax          | p.405 | Lyra         | p.365 | Piscis Austrinus | p.404 | Tucana                    | p.418 |
| Gemini          | p.374 | Mensa        | p.422 | Puppis           | p.409 | Ursa Major                | p.360 |
| Grus            | p.417 | Microscopium | p.403 | Pyxis            | p.408 | Ursa Minor                | p.354 |
| Hercules        | p.364 | Monoceros    | p.393 | Reticulum        | p.420 | Vela                      | p.410 |
| Horologium      | p.419 | Musca        | p.413 | Sagitta          | p.382 | Virgo                     | p.378 |

# THE SOUTH POLAR SKY

There is no southern equivalent of Polaris, the north Pole Star—in fact, the area around the south celestial pole is remarkably barren. This chart shows the sky from declinations  $-50^{\circ}$  to  $-90^{\circ}$ . Many of the stars on this chart are circumpolar for southern observers—that is, the stars never set and are always visible in the night sky. The farther south the viewer, the greater the amount of sky that is circumpolar.

# STAR MAGNITUDES

Star magnitudes shown here are for the equatorial and polar sky charts
