This star chart is designed for observers in the Southern Hemisphere looking towards the northern sky in August. It features a circular horizon with cardinal directions: WEST, NORTHWEST, NORTH, NORTHEAST, and EAST. The chart displays numerous constellations, including Virgo, Ophiuchus, Serpens Caput, Corona Borealis, Bootes, Draco, Ursa Minor, Cygnus, Delphinus, Sagitta, Vulpecula, Aquila, Scutum, Serpens Gauda, Capricornus, Equuleus, Aquarius, Pisces, Pegasus, Andromeda, Lacerta, Cassiopeia, and Cepheus. Stars are plotted with varying sizes representing their magnitudes, from -1 (largest) to 5 (smallest). Deep-sky objects are marked with specific symbols: galaxies (🌀), globular clusters (🌌), open clusters (🌠), diffuse nebulae (💨), and planetary nebulae (🌌). Key points of reference are indicated by colored lines and symbols: horizons (black), zeniths (red), and the ecliptic (yellow). The chart also includes a scale for observation times, ranging from July 15 to September 15, with standard and daylight-saving times provided.
