

On the outside

The external sex organs, known as the vulva or genitals, are located between the legs. There is a lot of variation in the shape, size, and color of female genitals. Everybody's genitals are unique and a teen should never worry that hers should look a certain way.

Shapes and sizes

Each female's genitals are different. Some have a bigger internal labia than external, while for others the opposite is true. The size of the clitoris also varies.

Staying healthy

Practicing good hygiene reduces the possibility of genital infections. After going to the bathroom, girls should always wipe from front to back to avoid spreading bacteria from the anus to the vagina. Washing the genital area every day and patting it dry thoroughly afterward, as well as wearing clean underwear, helps to keep it healthy. The vagina cleans itself, so it's not necessary to wash inside.

TEEN HINTS

Using a mirror

Using a small mirror to look between your legs, it's possible to get to know your genitals and see what part is where. Learn what's normal for you, so that you can recognize if there are any changes down there.
