

Rolled paper beads

311 Make a bead

Mark it here.

1. Cut a long, thin strip of paper about the height of this book. Mark the halfway point at one end, then draw two lines.

2. Cut along the lines. Then, dab glue along the strip leaving about 2cm (3/4in) unglued at the wide end.

3. Roll the unglued end firmly around a straw. Continue rolling, keeping the edges even until you get to the end. Then, slide the bead off the straw and let the glue dry.

These textured beads were made with crêpe paper.

314

Comic paper

Make beads from pages from old comics or newspapers.

313

Straight beads

Roll a straight strip of paper, rather than drawing the lines in step 1.

You could make beads from shiny wrapping paper.

Chunky bead

312

Cut a really long, narrow strip of paper and roll it carefully to make a fat bead.
