

Foil and paper birds

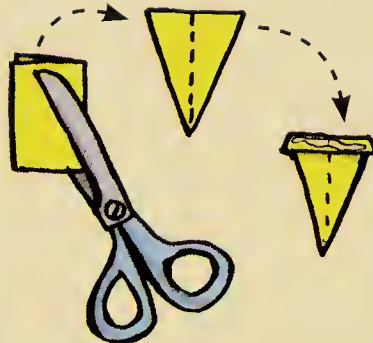

162 Make a bird

1. Tear off a large piece of kitchen foil. Scrunch it into a bird shape with a head and a fat body, tapering into a tail.

2. Rip lots of pieces of paper for feathers. Spread glue on the foil, then press one end of each feather onto the body to cover it.

3. Fold a piece of thin cardboard in half. Cut it out and fold the end over. Glue the end onto the bird.

Fold these ends over.

4. Cut two wide feet from cardboard and glue them to the bottom of the bird. Finally, draw or paint the eyes.

You could copy the ideas from the birds shown here, or design one of your own.

164 Fluffy feathers

Paint kitchen paper towels with different shades of paint. When the paper is dry, rip lots of feathers from it and glue them all over the foil.

163

Insect eater

Cut out a long pointed triangle for the beak. Glue it onto the body, quite near to the top of the head.
