

Africa

Northern Africa

Northern Africa is one of the hottest parts of the world. It is made up of mountains, rain forests, and a great, sweeping desert.

Rain forest

Rain forest grows near the equator, where there is heavy rain.

Hoggar Mountains

These red mountains rise up out of the Sahara Desert.

Nile River

The muddy banks of the Nile make fertile farmland.

Atlas Mountains

These mountains form a high wall between the Sahara Desert and the wetter land on the coast.

Ethiopian Highlands

The Ethiopian Highlands are hot, dry scrubland. Farming is very difficult here.

Sahara Desert

The Sahara Desert has burning hot days and freezing cold nights. Winds blow the sand into dunes.

Lake Chad

Lake Chad is now shrinking as the rivers that feed it are drying up.

Fennec fox

The fennec fox lives in the desert. Its huge ears give off heat, cooling the fox down.

Did you know?

- The Sahara Desert is the largest desert in the world.
- At 4,145 miles (6,670 km), the Nile is the longest river in the world.
