

Moon

Moon machines

This **Moon buggy** is used by astronauts to move around the Moon quickly.

This **lunokhod** is a Russian vehicle. It was put on the Moon to take photographs.

A **lunar module** carried astronauts from their spacecraft to the Moon surface.

Did you know?

It's possible to jump six times higher on the Moon than on Earth thanks to the weaker gravity there!

The Moon is a ball of rock that circles the Earth. It is our nearest neighbor in space. Astronauts have landed on and mapped its surface.

Moon surface

There are flat plains, valleys, mountains, and craters on the Moon's surface.

Moon from Earth

The Moon looks bright because one side is lit by the Sun.

Climate

Because there is no wind or rain on the Moon, flags won't fly and footprints will never disappear.

Astronaut's footprint

American flag is held up by wire.

Craters

Craters are big holes on the Moon's surface.

Moon phases

As the Moon travels around the Earth, we see different parts of its sunlit side. This gives us the phases of the Moon.

Full Moon

Crescent Moon

Half Moon
