

Planets

Did you know?
Saturn has 18 moons in its rings – more than any other planet!

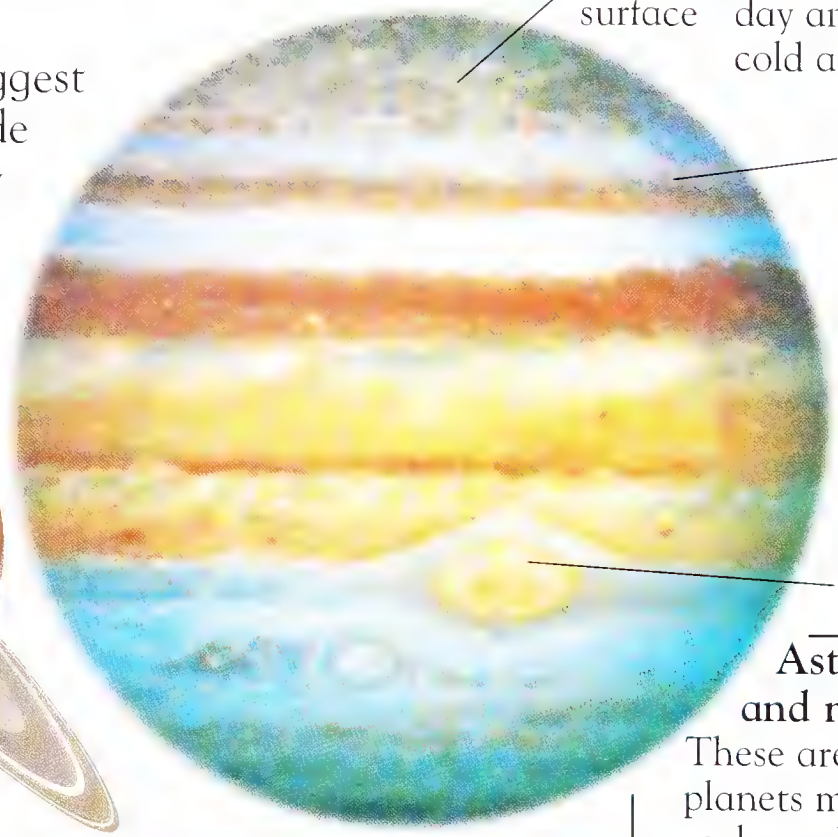

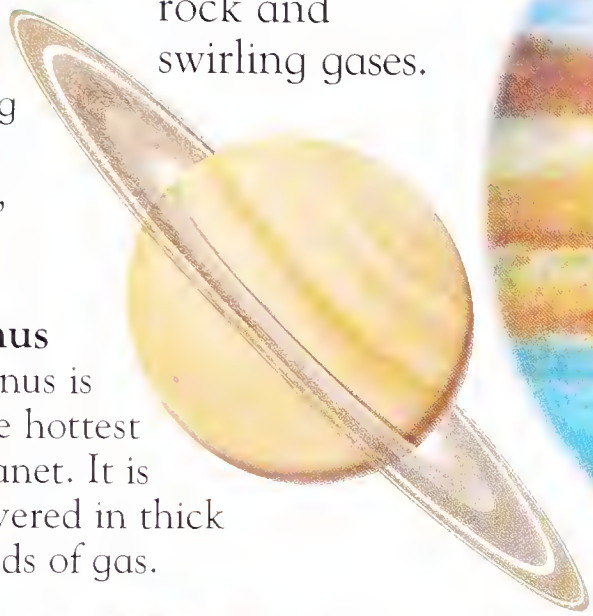

Planets are huge balls of rock, metal, and gas that travel around a star in space. The Earth is one of a family of nine planets that circle the Sun.

Jupiter
Jupiter is the biggest planet. It is made up of hot, runny rock and swirling gases.

Mercury
Mercury is closest to the Sun. It's boiling hot by day and freezing cold at night.

Saturn
Saturn's shining rings are made up of ice, rocks, and dust.

Jupiter is larger than all the other planets put together.

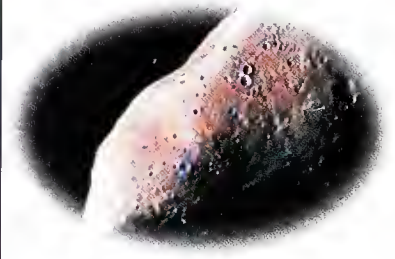

A red spot is a great storm.

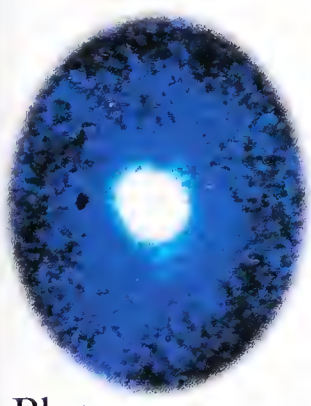

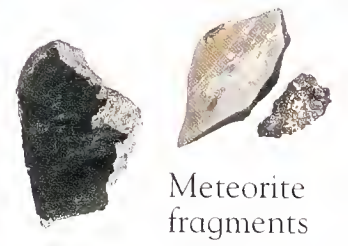

Venus
Venus is the hottest planet. It is covered in thick clouds of gas.

Asteroids and meteorites

These are tiny planets made up of rocks and metal.

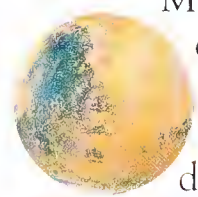

Asteroids are larger than meteorites.

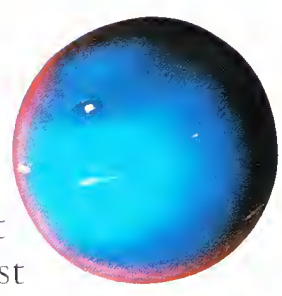

Pluto
Pluto is the smallest planet. It lies farthest from the Sun.

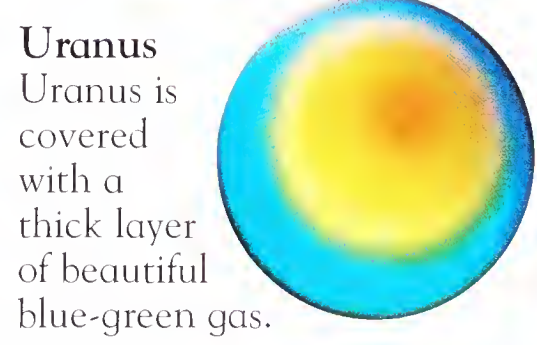

Earth
Earth is the only planet with air and water, vital to all living things.

Mars
Mars is very cold, and covered in dead volcanoes, craters, and dusty red soil.

Neptune
Neptune has cold winds that blow as fast as the Concorde.

Uranus
Uranus is covered with a thick layer of beautiful blue-green gas.
