

Science

Types of scientists

Chemists produce new foods, drugs, and materials.

Radiologists take X rays and study the results.

Forensic scientists study the clues that can solve crimes.

Zoologists study animals and how they live.

Geologists study rocks to find out about the Earth.

Science is observing, examining, and learning about the world around us. Scientists often find new ways to improve people's lives.

Laboratory

Many scientists work in laboratories. These rooms have the special equipment scientists need to perform and record experiment results.

Bunsen burner

Test tubes

Flask

Microscope

Experimenting

Scientists learn by doing experiments.

1 Scientists ask a question and come up with a possible solution.

2 They do tests to prove they are right.

3 They take measurements and keep careful records as proof.
