

Seasons

In many parts of the world there are different seasons in the year. The changes they bring affect most living things.

Four seasons

In many parts of the world, there are four seasons in the year.

Spring

The weather warms up. Plants begin to grow and many animals are born.

Trees grow new leaves.

Lambs are born.

Earth and the seasons

We have seasons because the Earth tilts as it circles the Sun. When the north pole leans toward the Sun, it is summer in the north and winter in the south.

Summer

The days are long and warm. Flowers bloom and fruits grow.

Butterflies feed on flowers.

Plants flower.

Trees are in full leaf.

Winter

Winter days are dark and cold. Little grows in the frozen soil.

Some trees have no leaves.

Some animals hibernate all winter.

It may often snow.

Fall

Fall days are shorter and cooler. Nuts and berries ripen in the woods.

Some trees start to lose their leaves.

Squirrels collect nuts for winter food.

Did you know?

The Arctic tern spends summer at the north pole, then flies all the way to the south pole for summer there!

Polar seasons

There are two seasons at the poles.

In summer, it is always light.

In winter, it is always dark.

Tropical seasons

There are two seasons in tropical areas – one wet and one dry.

For half the year, winds blow in from the sea, bringing heavy rains.
