

Trees

Did you know?
The world's tallest tree is a coast redwood in North America. At 151 ft (111 m) it is taller than the Statue of Liberty in New York.

Because of their size, it's easy to forget that trees are plants. But like any plant, they have roots, a stem, leaves, and flowers that make seeds.

Leaves will drop off in the fall. Branches, twigs, and leaves make up the crown of the tree.

Oak tree

Every part of this deciduous oak tree helps it survive and grow.

Leaves

Leaves use sunlight, water, and air to make food for the tree.

Trunk

The trunk is the strong stem that sucks up food and water from the soil.

Trunk

Acorns

Acorns are the seeds of the oak tree.

Roots grow under the ground.

Bark

The bark protects the trunk.

Tree products

Paper is made from mashed up wood.

Sculptures, such as totem poles, may be carved out of a whole tree trunk.

Maple syrup is made from the sweet juice, called sap, of sugar maples.

Furniture is made of wood from the trunks of trees.

Unusual trees

Bonsai trees are dwarf trees that are grown in pots.

Palm trees grow on sandy beaches.

Baobab trees survive in the desert by storing water in their trunks.

Mangrove trees grow in swamps. Their roots arch out over the water.
