

Color

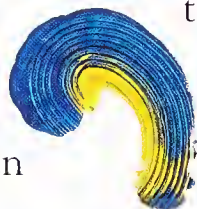

A world without color would be a dull place. The beautiful colors around us are actually different kinds of light.

Sunlight

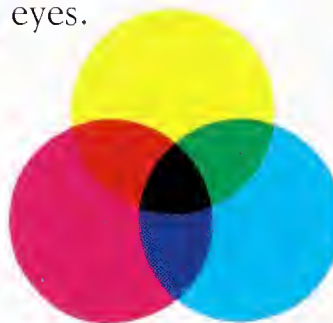

Although sunlight looks white, it is actually made up of many different colors. You can see these colors in a rainbow.

_____ Red
_____ Orange
_____ Yellow
_____ Green
_____ Blue
_____ Indigo
_____ Violet

Seeing in color

When rays of light hit this painting, some of the colors in the light are soaked up. Others bounce back into our eyes.

Primary colors

The primary colors are red, blue, and yellow. By mixing these, any other color can be made.

Paint

Paint was once made from natural sources.

Rocks or plants were crushed to make a colored powder. This was mixed with oil.

Today, most of the paints we use have been made from chemicals.

Life without color

Colors affect our feelings about things. Which of these meals would you rather eat?

Color in nature

Colors help animals communicate.

This frog's bright colors warn that it is poisonous.

Peacocks attract mates with their colorful feathers.

Did you know?

Chameleons change color when they feel angry, frightened, or too hot or cold.
