

Computers

Calculator

A calculator is a small computer that can figure out complicated arithmetic fast.

Computers don't just sit on desks. They are the superfast electronic brains behind many of the machines we use in everyday life.

Virtual reality

With virtual reality machines you can imagine you are at the controls of a supersonic jet or spacecraft.

Games

Computer games are just for fun!

Robot

Robots do many different jobs in factories. In car factories, computers "tell" robots how to assemble a car.

Headset has a mini-TV screen

As you move your head, different images appear on the TV screen.

Controls

Motors rock the machine to make the "journey" more realistic.

Flight simulator

Pilots train in simulators on the ground. Computers make it look as if they are flying in the air.

Movies

In many movies, computers create amazing special effects.

Design

Designers use computers to create pictures of their ideas, such as a new car.

Personal computer

These computers can be used in many ways, from playing games to doing homework.

Chips are the "brain" of a computer.

A hard disk stores information inside the computer.

A laptop is a personal computer that you can carry around.

Did you know?

The first computer was so big it filled up a whole room!
