

Electricity at home

In the kitchen

Ovens often use electricity to heat up and cook our food.

Microwaves run on electricity. They cook food very quickly.

Refrigerators use electricity to keep food cool and fresh.

It's hard to imagine life without electricity. We use it to heat and light our homes, cook our food, listen to music, and talk on the phone.

Light

Electric lighting is bright and safe. It replaced candles and gas lamps, used in the past.

Lightbulb

Electricity makes lightbulbs glow and give out light.

Lamp

At night, lights shine out in the dark.

Electric plug

Electricity flows along wires and into the plugs in wall sockets.

Safety in the home

Electricity can be very dangerous.

Never touch damaged wires.

Never use electrical objects near water.

Entertainment

Televisions use electricity to make sounds and pictures.

Computers are powerful machines. They use very little electricity.

Telephones use electricity to change our voices into signals.
