

Energy

Sun

The sun provides the energy all living things need.

People and energy

Your body needs energy for everything you do – whether you're thinking, working, or running.

A person running, a fire burning, a plant growing – all these things use energy. Energy makes things happen. Without it, there would be no life on Earth.

Types of energy

Energy comes in many forms.

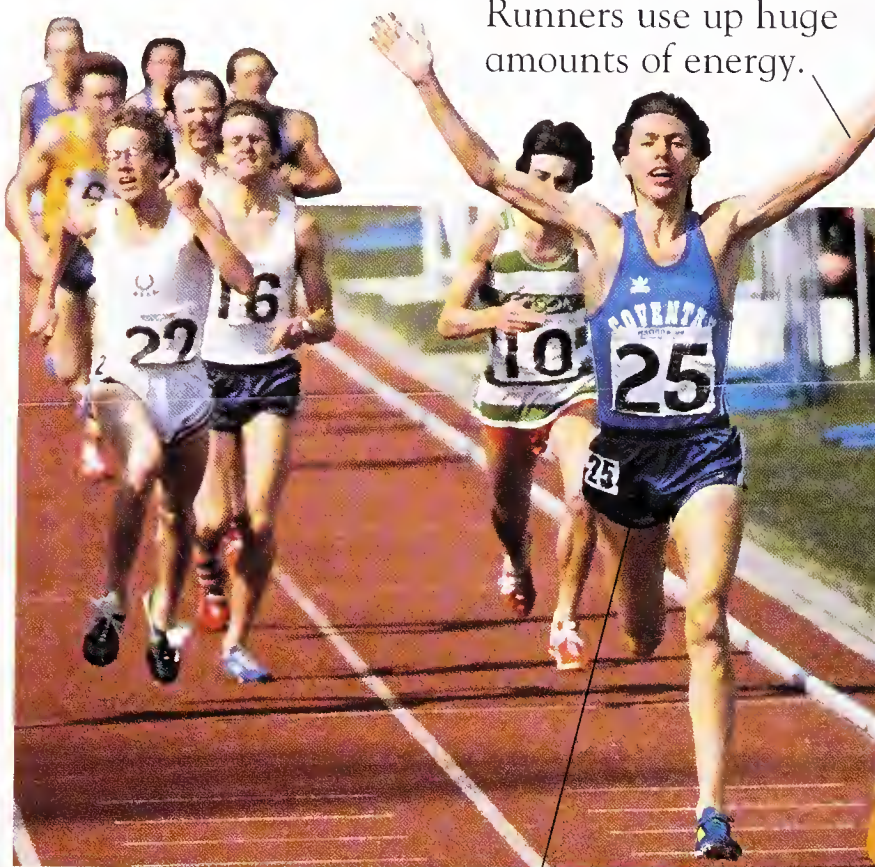

Heat energy can be used to cook food and keep us warm.

Light energy

can come from a flame, electric light or the sun.

Sound energy is produced when something vibrates.

Runners use up huge amounts of energy.

Athletes eat high-energy foods.

Food for energy

People and animals get energy from the food they eat. Some foods give us more energy than others.

Calories

The energy value of food is measured in calories. Pasta has more calories and gives us more energy than carrots.

Pasta

Carrot

Chemical energy is stored in plants. Animals eat the plants and use the energy.

Did you know?

Old animal droppings can be a source of energy. They give off a gas that burns.

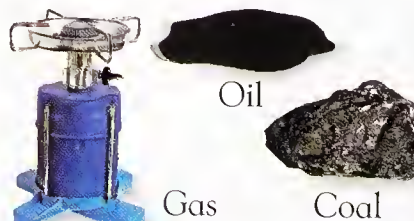

Machines

All machines need energy to work. A car gets energy from burning fuel, but a bike gets its energy from you!

Energy supplies

Oil

Gas

Coal

Oil, coal, and gas are all sources of energy. But these fuels will run out one day.

Electrical energy is the main source of power in modern homes.
