

Factories

Did you know?
5,000 chocolate bars are produced by one factory in the time it takes water to boil!

Chocolate factory

A chocolate factory is organized so that chocolate bars can be made quickly and cheaply.

2 Production process

Machines make the chocolate, pour it into molds, and wrap it when it's cold and hard. Chocolate bars on conveyor belt

Chocolate is checked for quality.

1 Raw materials

All the chocolate ingredients are sent to the factory.

Sugar

Milk

Cocoa pods

Types of factories

A hat factory makes thousands of hats in one style at a time.

Washing machine factories

have testing facilities to ensure quality.

Computer factories make hundreds of new computers on a conveyor belt.

Car factories

use robots to put cars together.

3 Finished product

The finished chocolate bars are packed and shipped to stores, ready for you to buy.

Chocolate bar

Leather goods

This shoe factory uses the leftover shoe leather to make other goods, such as wallets and key rings.

Food factories keep their machines very clean, so that the food is safe to eat.
