

Fossils

Mammoth

This huge mammal is now extinct. It was found frozen in the soil.

Shark's tooth

A tooth can tell scientists the size of an extinct animal.

Dung

This dropping came from a sharklike animal.

Plant fossils

This poplar leaf fossil looks like poplar leaves today.

Ammonite

Ammonites were sea creatures that are now extinct.

Print of skeleton

Fin

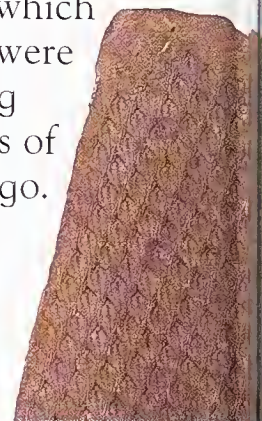

Eye socket

Outline of soft tissue in rock

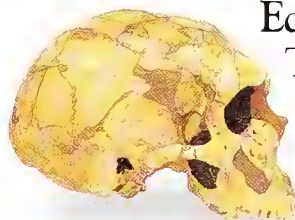

These seed fossils are about 30 million years old.

Bark fossils tell us which plants were growing millions of years ago.

Ichthyosaur

This fossil of an extinct sea reptile was formed when the earth around it slowly turned into stone.

Early human skull

This fossilized skull teaches scientists about the first humans.

Amber spider

This spider has been fossilized in amber, the juice of an ancient plant.

Dinosaur footprint

This fossilized footprint shows how big and heavy its maker was.

Did you know?

This man died 1,740 years ago, but his body was preserved in a peat bog in Denmark.

Fossil hunting

Only the simplest tools are needed to find fossils.

Fossils are very fragile. They must be uncovered very carefully.

A magnifying glass is useful to examine a fossil.
