

Human body: systems

Nervous system

This is made up of nerve pathways that take information to and from the brain.

The brain is the body's control center.

Nerves carry signals to and from your brain.

Reflex action

When something nearly hits your face, you cannot help blinking. This protects your eyes and is called a reflex action.

Reading

Sleeping

Brain activity

These special pictures show that different parts of the brain are used for different activities.

Your body is a wonderful and complicated machine. It is made up of systems that work together to keep you alive.

The spinal cord is made up of many nerves.

Nerve endings

Nerve endings collect information from inside and outside the body.

The brain sends signals to muscles along your nerves.

Memory

Your brain stores the information you learn in your memory.

Blood system

This is made up of blood vessels that take blood, carrying food and oxygen, to every part of your body.

Arteries take blood from the heart, and veins carry it back.

Heart pumps blood around the body.

Vein

Blood cell

Blood is made up of millions of cells.

Cut

When you cut yourself, a sticky clot forms on the skin. This is called a scab.

Giving blood

Giving blood provides extra blood for patients in the hospital.

Pulse

When you feel your pulse, you feel the beat of blood being pumped around by your heart.

Did you know?

If your blood vessels were joined up, they would stretch around the world twice.
