

Mammals

Large eyes see well, even in the dark.

Long whiskers touch and feel.

Sharp teeth catch and chew food.

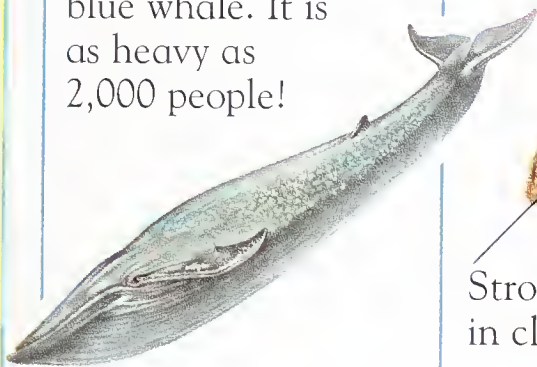

Many of the animals we know best are mammals. Cats, cows, monkeys, and mice are all mammals. So are human beings.

Leopard

The different parts of a leopard's body help it survive. Other land mammals have similar kinds of bodies.

Did you know?

The biggest mammal in the world is the blue whale. It is as heavy as 2,000 people!

Strong claws help in climbing trees.

Dappled fur for camouflage among the trees

Long tail for balance

Marsupial mammals

Some mammals, like this kangaroo, have furry pouches on their tummies. Their babies spend months inside growing.

Mammal facts

Echidna

Mammals have fur, hair, or even spines on their bodies.

Wolf

Mammals are warm to the touch. They need food for energy.

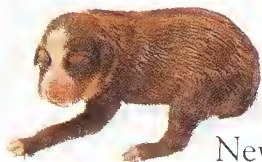

Chimp

Mammals have larger brains than other animals.

Mother and baby

Baby mammals grow inside their mother's body until they are born.

Newborn puppy

Baby puppies grow bigger on their mother's milk.

Playing and fighting together makes the puppies grow stronger.

Mammal babies feed on their mother's milk.

Giraffes
