

Materials

Did you know?

Nowadays sweaters can be knitted from recycled plastic!

Cotton

Some materials, such as cotton, are found naturally. Others are made in factories.

Glass

Glass is useful because you can see through it. It is made from sand, limestone, and soda.

Steel

Steel is a hard, strong metal. It is made from limestone, carbon, and iron melted down together.

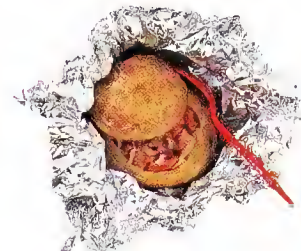

Cotton plant

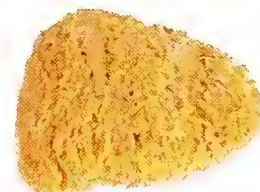

Cotton is turned into thread to make clothes.

Materials for different jobs

Aluminum foil can withstand high temperatures. It is used for cooking.

Natural sponges soak up lots of water. They are good for washing with.

Polyester fabric is made in factories. It is soft and often used to make teddy bears.

Plastic

Plastic is strong and does not rot or rust. It is made from heated oil.

New materials

New artificial materials are being invented all the time.

Lycra clothes fit comfortably.

Bullet proof vest made of Kevlar

Recycling

Some materials, like glass, can be recycled to make new products.

Recycled glass

Wood is naturally hard and strong. It is often used to make furniture.
