

Plants

Types of plants

Cacti grow in hot, dry areas and store water in their stems.

Mosses grow in moist soils. They never flower.

Seaweeds grow in the sea attached to rocks.

Grasses are an important food for many animals.

Trees are the biggest plants. Their trunks are really very large stems.

There are more than 425,000 different plants in the world, and they come in every shape and size – from delicate seaweeds to towering trees.

Flowers make seeds.

Shrub
All plants have the same basic parts, just like this *Skimmia* shrub.

Leaves make food for the whole plant.

Food
Plants use air, water, the green in their leaves – chlorophyll, and the sun’s energy to make food.

Sprouting seed

Beechnut seeds

1 The seed soaks up water, swells, and splits.

2 A tiny root grows down into the soil.

Seed leaves wither.

Seed case

3 A shoot grows up toward the light.

Did you know?

Giant kelp seaweed grows so tall it would reach higher than the Leaning Tower of Pisa in Italy!

Plants as food

Corn is made up of seeds.

Tarragon is a leaf.

A **carrot** is a root.

Cabbage is a group of leaves.

Broccoli is a mix of flowers and stems!

Ginger is a root.

A **tomato** is a fruit.
