

Rain forests

Forest flowers

Slipper orchids are pollinated by only one type of bee.

Shaving brush trees attract bats with their scented flowers.

Steriphomas flowers are tube-shaped. Only long-tongued insects can feed on them.

The **hotlips plant** has beautiful bright red flowers.

Passion flowers are vines that grow quickly toward the light in the canopy.

Tropical rain forests are hot, sticky places packed with trees and vines. All the plants and daily rainfall make them dark and steamy.

Trees grow tall to reach the sun.

The forest roof, about 130 ft (40 m) above the ground, is called the canopy.

Thick leaves and branches

Leaves stay on the trees all year round.

Vines climb up trees.

Young sapling

Only smaller tree varieties grow lower down, where it is shady.

Forest floor is dark and wet

Forest fruit
Rain forest plants provide us with all sorts of delicious foods to eat.

Bread fruit

Nutmeg

Cocoa

Ginger

Pineapple

Rain forest tribes

The Txucuhamai tribe has lived in South American rain forests for thousands of years.
