

Ships and boats

Anchor

Anchors act as brakes. They dig into the seabed and stop ships from moving.

Cruise ship

All boats do a particular kind of job. A cruise ship gives passengers a vacation at sea.

Portholes are cabin windows.

Lifeboat

Rope

Ropes are used a lot on boats. Knots hold things in place.

The bridge is where the captain controls the ship from.

Anchor

Types of boats

Hovercraft float on a cushion of air. Fans blow air downward and lift the boat up.

Cargo ships carry containers full of goods around the world.

Trawlers are fishing boats. They drag a net that scoops up fish from the sea.

Frigates have missiles on board to strike enemy ships in times of war.

Paddle steamers go up and down rivers. They are driven by a wheel at the back.

Swimming pool

Rudder for steering

Did you know?

Cargo ships carry up to 2,700 containers. These would stack almost twice as high as Mount Everest!

Safety

All ships carry rescue equipment in case of accidents at sea.

Flares are like fireworks. They lead rescuers to where you are.

Life jackets help people float if they fall into the water.

Hull

Life rafts are used to carry passengers if their boat sinks.

Moving in water

Different boats move in different ways.

Motorboats have an engine that turns a propeller.

Rowboats have oars to move them through the water.

Sailboats are driven by the wind.
