

South America

Central America and Caribbean

Central America's volcanoes, forests, and Caribbean sun-drenched islands are home to some exotic wildlife.

Pitch Lake

This lake in Trinidad is full of pitch – a black sticky tar in the ground.

Scarlet ibis

The ibis lives on the Caribbean islands. It pulls worms out of the mud with its long beak.

Volcano

On many of the islands, old volcanoes are covered by lush tropical rain forest.

Waterfall

The tropical islands have heavy rainfall. There are many spectacular waterfalls.

Coral reef

Coral reefs in warm Caribbean waters are home to sponges and tropical fish.

Passion flower

Passion flowers grow in climbing vines in the forests.

Beach

White, sandy beaches stretch their way around the shoreline. They are fringed with coconut palms.

Bee hummingbird

Cuba is home to the world's smallest bird. Bee hummingbirds are the same size as a butterfly!

Mangrove tree

These trees grow in wet, boggy land along many tropical coastlines.

Did you know?

- The Caribbean has some of the most dangerous storms in the world, called hurricanes.
- Hummingbirds are the only birds in the world that can fly backward!
