

Television

Did you know?

The smallest television in the world is so tiny it can fit on a wrist-watch!

Television camera

Television uses sound and moving pictures to broadcast sports, films, programs, and news from around the world.

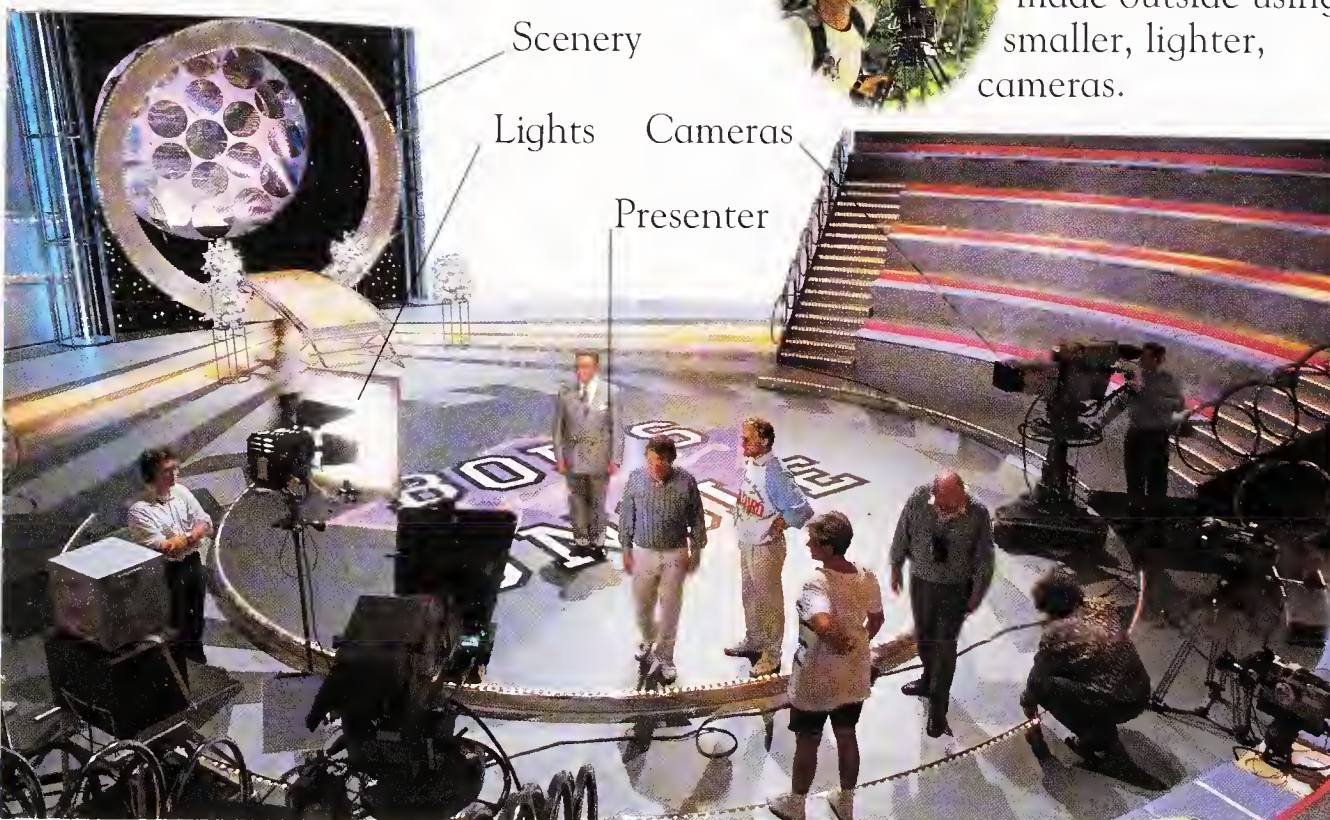

Control room

People in the control room keep in close touch with the studio.

Television studio

Most TV programs are made inside with special lights and cameras. The large rooms are called studios.

On location

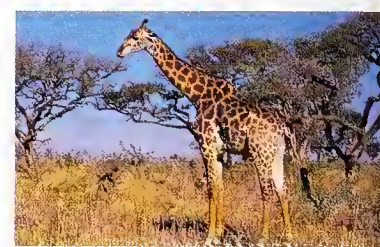

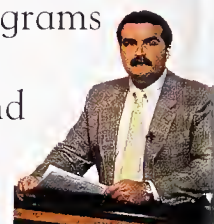

Some programs are made outside using smaller, lighter, cameras.

TV programs

Movies are often shown on television.

News programs give daily reports and stories.

Documentaries, such as wildlife films, are programs about the real world.

Social events can be televised to reach wider audiences.

Children's programs are made to entertain and inform children.

How television works

1 Transmitters send out television signals as radio waves.

2 An antenna on the roof picks up the radio waves and sends signals to your

3 The television set turns the signals into sounds and pictures.

Satellite television

Some television signals are broadcast from satellites in space.

Satellite dish on roof
