

World map: continents

This world map shows all seven continents. Each continent, except for Antarctica, is made up of several countries.

North America

North America stretches from the North pole almost to the equator.

Europe

This is one of the smallest continents, but it has one of the largest populations.

Asia

Asia is the largest continent, with the largest population.

North pole

South pole

Globe

A globe is a round map of the world. The Earth spins around an invisible pole, called the north pole at the top and the south pole at the bottom.

The equator is an imaginary line that divides the Earth in half.

Did you know?

Over 90 percent of the world's ice can be found in the continent of Antarctica.

South America

The continent of South America stretches all the way from the equator almost to the south pole.

Africa

Africa is the second largest continent. The equator runs through the center of it.

Australasia

This area includes Australia, which is the smallest continent, and many other small islands.

Antarctica

This is the coldest and most southerly continent. No one lives here permanently.
