

Bicycles

Did you know?

46 people once rode one motorcycle at the same time!

Bicycle

Bikes are machines. They are moved by cyclists pushing the pedals around with their feet.

Tires are filled with air, which helps cushion bumps.

Chain links pedals to back wheel

Pannier

Panniers can be attached to a bike to carry things.

Bikes are a popular transportation choice because they are cheap, easy to repair, and keep us healthy. Add an engine, and you have a motorcycle.

Riding a bicycle

Learning to ride a bike is a tricky skill. It takes a good sense of balance.

Types of bicycles

Road bikes are light but strong for use on bumpy roads.

Rickshaws are made to carry several people, like taxis.

Unicycles are often seen in circuses. Balancing on one wheel is difficult!

Triplet tandems are for three riders. They have three seats and three sets of pedals!

Cantilevers are the most modern racing bikes. They have streamlined frames.

Motorcycles

Motorcycles are more complicated machines than bikes. Powerful engines move them.

Engine Fuel tank

Scooters have small engines. They are popular for traveling around town.

Motocross bikes are used for racing across rough country.
