

Dinosaur types

Did you know?

The longest dinosaur was *Seismosaurus*. At 131 ft (40 m) it was longer than many modern planes.

Dinosaurs ruled the Earth for 165 million years. There were more than 300 different kinds, but they didn't all live at the same time!

Edmontonia

Edmontonia had spiky body armor. This made it hard to attack.

Bony crest

Troodon

Troodon used its huge, curved claws to catch its prey.

Psittacosaurus

Psittacosaurus used its horny beak to strip leaves from trees.

Corythosaurus

Corythosaurus was a duck-billed dinosaur. It lived in the Cretaceous period, and fed on leaves.

Long tail for balance

Strong back legs to run from danger

Ducklike beak

Front legs pulled down branches.

Euoplocephalus

Leathery skin and spikes protected *Euoplocephalus* from its enemies.

Deinonychus

Deinonychus was a fast and deadly hunter, with strong teeth and sharp claws.

Iguanodon

Iguanodon was a large plant eater with a sharp beak.

Head shapes

Oviraptor ate eggs, cracking the shells with its pointed beak.

Stegoceros

Stegoceros used its strong, bony skull to head-butt its enemies.

Compsognathus had a long neck, narrow jaws, and sharp teeth.

Triceratops had three horns and a frill to protect its neck.

Stegosaurus had a small head, with a brain the size of a walnut!
