

Eggs and nests

Types of eggs

Butterfly eggs are laid on leaves and look like tiny jewels.

Frogs lay hundreds of eggs, protected by a jelly, in water.

Tortoise eggs are soft and leathery and buried in sand.

Hens' eggs are soft at first, but harden quickly as they dry.

Dogfish lay their tough egg cases among seaweed.

Slugs lay clear eggs in damp places, such as under a log.

Birds and insects, frogs and snakes – most animals lay eggs. But some animals build nests especially to protect their eggs and babies.

Bird's nest

Birds collect all sorts of materials to make a warm, comfortable home like this wagtail's nest.

Moss for warmth

Feathers for warmth

String

Mud mixed with spit

Unusual nests
Male weaver birds use their beaks and claws to weave wonderful nests of grass.

Wasp nests are made from chewed-up wood and feel like paper.

Twigs for structure

Shiny foil

Lichen for camouflage

Quails scrape nests among rocks and dirt, so their brown speckled eggs will blend in.

Did you know ?

Red-billed hornbills make nests in hollow trees and seal off the entrance until their chicks hatch.
