

Grasslands

Grasslands are vast, flat, grassy plains. Few trees grow there because it is too dry. Grasslands have different names around the world.

Prairies

The prairies lie in the center of North America. The fertile land has been turned into wheat fields.

Small scrub tree

Flat, dry land

Savanna

The tropical grasslands of Africa are called the savanna. The weather is warm, but very little rain falls. Grasses grazed by herds of animals

Grasses

There are many kinds of grasses. But they are all very adaptable.

Grasses can dry out or even burn, but will grow back within hours of rain.

Pampas

grasses have strong woody stems to keep them upright in strong wind.

Cereals are grasses grown on the prairies. They include corn and wheat, and are resistant to disease.

Pampas

The pampas of South America are used for cattle ranching. Cowboys on the pampas are called gauchos.

Mongolian nomad

Steppe

Steppe land exists across Asia. These cold, but fertile plains are home to nomads, who move with their animals in search of grazing land.

Outback

In the dry Australian outback there are huge sheep farms called stations.

Did you know?

Bamboo is the fastest growing grass in the world. It can grow 3 ft (1 m) a day – the same height as a 2-year-old child.
