

Hospitals and doctors

1 Ambulances take emergency patients to the hospital very quickly.

2 X rays show whether the patient has broken any bones.

Did you know?
In some countries, mobile hospitals visit patients instead of the other way around!

Hospitals are places where doctors and nurses care for people when they are sick or injured.

Accidents and emergencies

After an accident, patients are taken to the emergency room. Doctors examine them when they arrive.

3 Some patients have to go to an operating room for surgery.

4 After the operation, patients are moved to a ward to rest and recover their strength.

Doctors at work

Doctors usually treat patients in an examining room.

Doctors sometimes treat people at the scene of an accident.

Doctors can give people health check-ups at work.

Doctors visit their most sick patients at home.

Some doctors have to fly to patients who live in remote areas.

Intensive care

Very sick patients may need special equipment to stay alive. This is called intensive care.

Nurses

Nurses care for patients both in hospitals and in homes.
