

Human body: skin

Your hair keeps in heat and protects your scalp.

Eye brows stop sweat from dripping into your eyes.

Skin senses heat, cold, moisture, and pain.

Your made-to-measure skin is waterproof, elastic, and tough. It protects your body, keeping your insides in and harmful germs out.

Skin

Skin is dead on the outside. Dry specks brush off our bodies every day. New skin grows underneath.

Skin is stretchy and moves when you do.

Skin contains tiny nerves that can sense touch.

Sun-screen

Skin protection

It's important to protect your skin from the sun's harmful rays.

Old age

As you become older, your skin begins to sag and wrinkle.

Hair

There are small hairs all over your body.

Did you know?

Your skin weighs about 7 lbs (3 kg). That's as much as a small bag of potatoes!

Skin uses

Skin is waterproof. It protects you when you wash or go swimming.

If you are cold, the hairs on your skin stand up and trap air to keep you warm.

When you are hot, your skin sweats salty water to cool you down.

Hair

The hair on your head can come in any shape, length, and color. Hair helps keep you warm.

Fingerprint

The skin on everybody's fingertips has tiny ridges. These make unique patterns called fingerprints.
