

Living things

Stones do not need air to breathe. They are not living.

Animals and plants are both living things. But there is one big difference – plants can make food for themselves, while animals have to find it.

Sunflower makes seeds

Animals

All animals move around to find food for themselves, just like this chicken.

Chickens have young called chicks.

Chickens peck the ground for food.

Chicken breathes oxygen

Dog

Spider

Sea urchin

Sponge

Bird

Plants

Like all plants, sunflowers are alive. They stay in one place and make food for themselves.

Plants use water, air, and sunlight to make their own food.

Sunflower is rooted in the ground

Corn

Moss

Cactus

Thistle

Seaweed

Did you know?

Coral may look like a lump of rock, but it is made of millions of tiny animals.

Ingredients for life

Water is an important part of every plant and animal.

Air helps plants and animals make energy for themselves.

Light helps plants grow. Without plants, animals would die from hunger.
