

Pop song structure

Many simple pop songs are arranged into four sections. The first two sections and the last section all use the same melody, usually called "A." The third section has a different melody, usually different words, and can be in a different key. The "B" section is sometimes called the "middle eight," or "chorus".

△ Basic structure

The most common pop song structure features two repetitions of "A," followed by one "B" section, returning to "A" to conclude.

Bing Crosby's 1942 hit single, "**White Christmas**," still tops the **best-seller single charts**, with more than **50 million copies sold**.

△ Compound AABA form 1st line

"Yesterday" by The Beatles has two contrasting types of musical material, "A" and "B," arranged to make a longer song in a compound form.

△ Strophic ballad

Pop ballads are often strophic, which means that their verses are repeated with the same tune, "A," but with different words each time. They are usually slow and sentimental.

REAL WORLD

Rock 'n' roll

Rock 'n' roll became a teenage craze in the 1950s. It is a fusion of two popular music styles: rhythm 'n' blues and country music. Loud and fast, with driving syncopated rhythms and lyrics, this genre challenged adult authority and establishment views. Elvis Presley was one of its most celebrated performers.
