

SATURN V

Rocket

The biggest and heaviest launch vehicle ever built, Saturn V was the rocket that took humans to the Moon. Built in the United States by a team led by Wernher von Braun – the great German rocket designer – it weighed 2,970 tonnes, and could blast a crew of three astronauts into space.

Escape rocket pulls command module to safety in event of faulty launch

Command module carried three astronauts

This section housed the lunar module, which landed on the Moon's surface

The command module was the **only part of the Apollo craft to return from the Moon.**
