

APOLLO 13

Manned lunar landing

The seventh of America's Apollo Moon-missions, Apollo 13 almost ended in disaster when an oxygen tank exploded two days after lift-off. As they tried to get the craft back to Earth, the crew had to cope with a lack of water and oxygen. It was a near-fatal situation, but the astronauts finally splashed down safely in the South Pacific.

DATA FILE

SIZE: Command/service module – 11 m (36 ft) long

DATE OF LAUNCH: 11 April 1970

MISSION DURATION: 5 days, 22 hours, 54 minutes, 41 seconds
