

LUNOKHOD 1

Lunar rover

Named after the Russian for “lunar walker”, Lunokhod 1 was an unmanned robot rover that, in November 1970, became the first remote-controlled vehicle to visit another world. It landed on the Moon in a basin called Mare Imbrium (the Sea of Showers), took photographs of the lunar surface, examined the Moon’s soil, and studied the lunar environment for cosmic rays.

DATA FILE

SIZE: 2.3 m (7.5 ft) tall

DATE OF LAUNCH: 10 November 1970

MISSION DURATION: 10 months, 4 days (last contact)

SPACE AGENCY: Russian space program

The flip-up lid was covered with solar cells

Lunokhod 1 took more than 20,000 images of the Moon during its 10-month mission.
