

APOLLO-SOYUZ MISSION

Manned spacecraft

The two crews exchanged gifts – including **tree seeds to plant in their respective nations.**

The specially designed docking module allowed the crews to move between the spacecraft

Soyuz 19

Apollo command/
service module

The Apollo-Soyuz mission was partly political and partly scientific. The mission saw an Apollo command/service module dock with the Russian craft Soyuz 19, and involved three American and two Russian astronauts. They were docked together for almost two days. The teams collaborated on a number of science experiments.

DATA FILE

SIZE: Combined length of 18.5 m (60 ft)

DATE OF DOCKING: 17 July 1975

MISSION DURATION: 9 days, 1 hour, 28 minutes

SPACE AGENCIES: NASA and Russian space program
