

SPACESUIT

Astronauts who venture outside their spacecraft need a spacesuit that protects them from the vacuum of space, and also from extreme temperatures and radiation. The suit supplies oxygen to breathe, and – despite its bulkiness – must be flexible enough for astronauts to use their legs, arms, and hands.

DATA FILE

WEIGHT (ON GROUND): 49 kg (108 lb)

FIRST USED: 18 March 1965 (Alexei Leonov, Voskhod 2)

SPACE AGENCIES: Russian space program and NASA
