

HUBBLE SPACE TELESCOPE

Space telescope

This stunning image taken by the Hubble Space Telescope shows the Antennae galaxies colliding.

Hubble orbits around Earth at a **speed of 27,400 km/h (17,000 mph)**.

Orbiting above Earth's atmosphere, Hubble has sharper views of the Universe than any ground-based telescope. During its first 25 years in space, Hubble has made more than 1.2 million amazing observations, ranging from the planets Mars and Jupiter, through stunning nebulae (in which stars are being born), to the most distant galaxies ever seen.

Hubble Space Telescope

DATA FILE

SIZE: 13.2 m (43 ft) long

DATE OF LAUNCH: 24 April 1990

MISSION DURATION: Ongoing

SPACE AGENCIES: NASA and ESA
